

Test Automation and DevOps Built for ServiceNow

AutomatePro provides a **centralised intelligent Test Automation and DevOps platform** exclusively designed for ServiceNow. Our solution is engineered to provide end-to-end support across multiple instances and integrations, ensuring a seamless user experience.

Recognised as **ServiceNow's 2024 Store Partner of the Year**, we've helped empower Fortune 500 and FTSE 100 clients to maximise the value of their ServiceNow investment. Through accelerated delivery, enhanced test quality, increased efficiency, and greater confidence.

Faster Upgrades

Staying on the latest ServiceNow upgrade is essential to maximise the platform's potential and ROI. However, legacy testing processes makes upgrades arduous. AutomatePro's nightly regressions shorten upgrade timelines and ensure a smooth transition to the latest version by addressing defects immediately rather than waiting until upgrade time.

Enhanced Quality

ServiceNow's customisable cross-platform architecture requires robust testing for optimal performance. AutomatePro delivers continuous end-to-end testing and monitoring, preventing production issues before they affect end-user productivity.

Greater Efficiency

The demand for faster deployment requires greater efficiency. Our no-code technology simplifies development, allowing teams, regardless of their technical expertise, to accelerate time to market, increase testing reliability, and minimise risks.

Automation vs. Manual Testing

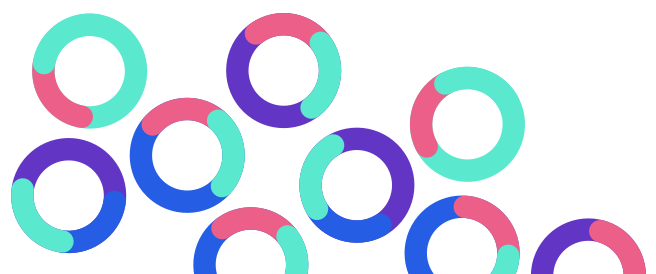

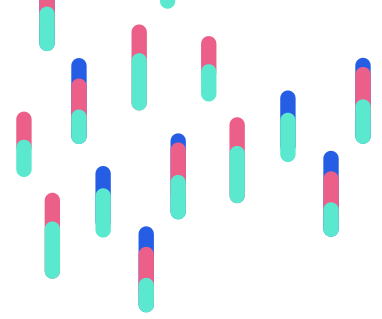

Test automation offers a scalable and superior approach to testing on the ServiceNow platform. Leveraging solutions like AutomatePro, which automates the entire DevOps process, reduces the risk of human error and minimises manual intervention. This allows developers to focus on value-added tasks and improves business productivity and efficiency.

Return on Investment (ROI)

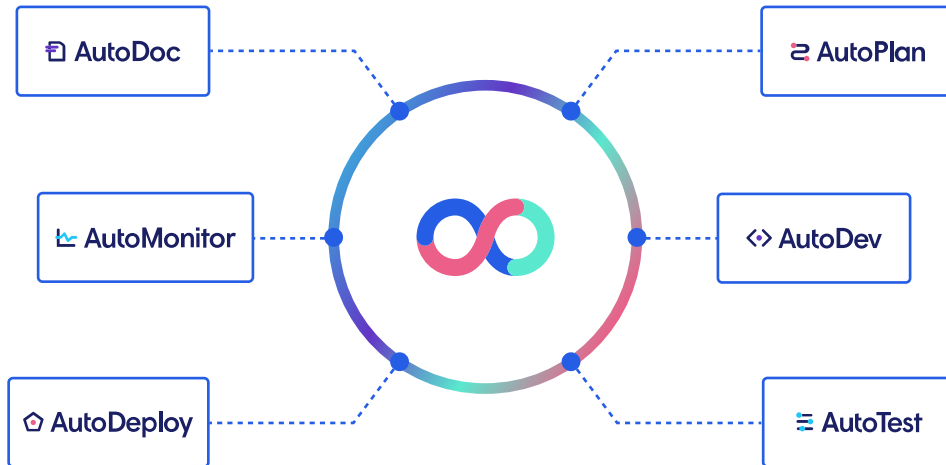

Test automation is more than just software; it's a strategic investment that should be configured to maximise value.

The AutomatePro Platform

The AutomatePro platform offers six integrated solutions (AutoPlan, AutoDev, AutoTest, AutoDeploy, AutoMonitor & AutoDoc), each engineered to deliver significant cost savings, accelerate ServiceNow implementation, and enhance delivery speed, all without compromising on quality.

AutoPlan: Assists in creating detailed testing strategies that align with your organisation's goals, ensuring comprehensive test coverage and efficient use of resources.

AutoDev: Automates repetitive development tasks, allowing developers to focus on more strategic initiatives and enhancing overall productivity.

AutoTest: Provides robust automation for test cases, reducing the time and effort required for manual testing and increasing test coverage.

AutoDeploy: Simplifies and accelerates the deployment process, reducing downtime and minimising the risk of deployment issues.

AutoMonitor: Offers real-time insights into platform performance, allowing for proactive issue detection and resolution.

AutoDoc: Generates comprehensive, audit-ready documentation with minimal user input, ensuring compliance and simplifying the documentation process.

Improved confidence

"I used to be a doubter, skeptical about test automation after past bad experiences, but **AutomatePro transformed our journey, turning doubt into belief.**"

ServiceNow Senior Software Engineer

"AutomatePro is an easy tool to navigate, configure and execute. **With no experience in development, I was able to build my own test cases and create documents.** I had no issue during the implementation due to the fantastic customer support the provide, and ready to provide support any time."

Robert A, Director, Product Owner
